By Laila Alvarez i Sean Gallup/Getty Images/Getty Images you've written or podcasts you've recorded with millions of people all over the world is simply a matter of a few clicks of your computer mouse. There are so many free websites offering to host your images, videos and, of course, content that sharing content has never been easier. Simply by finding the hosting site that works best for you and uploading a video, your file will be a link on the Web in no time. Locate the MP3 song file on your computer. You may have a folder titled "My Music" in your "My Documents" folder, for example, that contains your MP3s. Find the MP3 file and remember the name of that file for easy uploading later on. Visit one of the many MP3 hosting sites. Check www.audiohostings.com for a list of different mp3 hosting sites. Some, such as Kiwi6, host only mp3s. Others, though, can host MP4s, WAV or other types of music files. Look through the sites to find the one that you trust the most. Kiwi6 and Filexoom are easy to understand and work well. Once you've found the MP3 hosting site you'd like to use, locate the "Upload Now" or "Browse" button on the website. Find the MP3 file on your computer to upload to the MP3 hosting website. Click "Upload" and wait for the file to upload onto the computer. You should see a progress bar to watch the upload in progress on most hosting sites. Get the link provided by the hosting site that will go directly to the song download page or a link that will automatically download the song. This link should be provided immediately upon upload completion on the hosting site. You are now free to post that link in message boards or on a personal website to share with others. Remember to follow any copyright guidelines the song may have attached to it. Convert to MP3 format: In iTunes or Music, select songs and go to File > Convert > Create MP3 version or use a third-party file converter.Put MP3s on your player: Attach your MP3 player to your computer. Open iTunes or Music.Right-click a song and select Show in Windows Explorer (Windows) or Show in Finder (Mac). Copy the MP3 version and paste to MP3 player. This article explains how to convert music on a computer to MP3 format and move it to an MP3 player. These directions apply to iTunes 12.9 and newer on Windows 10 PCs, to iTunes on macOS Mojave (10.14) and earlier, and to the Music app in macOS Catalina (10.15) and later. If you have a collection of music in iTunes or the Music app on your computer, you don't need an iPod from Apple to listen to it on the go, nor do you need an MP3 player you can use with iTunes. You can put music from iTunes onto any MP3 player. If your MP3 player only accepts MP3 music files, you need to first convert the music to the MP3 format in the iTunes program or with a third-party converter. In iTunes or the Music app, the settings for converting iTunes songs to the MP3 format are straightforward. Select the songs you want to put on your MP3 player and go to File > Convert > Create MP3 Version. Music that is copy-protected with the DRM encryption system that Apple used in 2009 and earlier can't be converted with iTunes. Your other option is to use an audio file converter to save the music to MP3 format. There are online converters and offline converters. Use an online converter like Convertio to put a few iTunes songs on your MP3 player. Offline converters like Freemake Audio Converter are better for converting lots of files at once. If you choose a file converter tool, locate the song on your computer. To do that, right-click the song you want to put on your MP3 player, then choose Show in Windows Explorer (for Windows) or Show in Finder (on a Mac). Then, upload that file to the online audio file converter or import it into the offline converter. After the songs you want on your MP3 player are converted to the correct format for your device, move the files to the MP3 player. Not all MP3 players work the same way. Consult the documentation for your specific device if these steps don't work. Plug the MP3 player into your computer. Open iTunes or Music and locate the songs that you want to copy. One easy way to do this is to right-click the song and select Show in Windows Explorer (Windows) or Show in Finder (Mac). Copy the songs, making sure to select the MP3 version if there are multiple audio file formats. If the file extensions are hidden, you can change the settings to view them. If you have software associated with the MP3 player, use it to import the iTunes songs. Paste the iTunes music to your MP3 player. It is usually a folder you can access like a flash drive. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! By Contributor Updated July 21, 2017 MP3 Rocket is one of several music/video downloading services that takes advantage of the Gnutella Network, which allows users to share their files with others via the Internet. Similar to Limewire, the program is very easy to use and gives you unlimited free access to millions of music and video files. Download and install the software from the MP3 Rocket website, but be careful. The basic version of the program is free, but you can pay up to \$34 for a "pro" version if you want more than the basic ability to download and share files.Choose the type of file you'd like to download by clicking on one of the icons in the left panel or select "All Types." Enter the file name of the file you want to find in the box in the left panel, and click on "search" or select one of the categories from the toolbar across the top, which will give you access to the more popular music files.Select the genre of music you want from the list in the left panel and names of artists and songs will appear in the right panel.Double click on the artist and song you want and the software will begin searching the network for all files containing that information. They are then displayed as a list in the right panel.Click on the version you want to download and the program will download it to your computer. Your download time may be affected by the connection of the computer hosting the file. If you have the following connections it may take a while to download: Dialup (56k) 8 m 38 s, ISDN (128k) 3 m 46 s, DSL (512k) 56 s, Cable (1024k) 28 s, T1 (1484k) 19 s. Do not click on "Continue" on the MP3 Rocket home page if you want the free version of the software. Clicking on "Continue" brings you to a page to sign up for the Pro version, which can cost you up to \$35. To get the free version, click on the word "download" at the bottom of the page. Beware of copyrighted or licensed files that may be available on the network. Since it's a file-sharing service, there may be many of these listed. Downloading them without paying for them is illegal. Check the MP3 Rocket website for tips on how to recognize these files. By Christina Shaffer i image courtesy of Microsoft. The Philips GoGear MP3 allows you to sync hundreds of your favorite songs from your PC and listen to them on-the-go. Many GoGear models are bundled with the Philips Songbird software for transferring music and videos to the device. After you import your music or rip an album to your Songbird music library, you can sync them directly to the GoGear by using the drag-and-drop method. Prior to syncing the files, however, make sure they are in a format that is supported by your player's model, such as MP3 or WAV. Connect the Philips GoGear to the computer by using the device's USB cable. Add music to your Songbird music library by clicking the "File" tab and selecting the "Import Media" option. Select the folder that contains the songs you want to sync to the device, such as My Music, and click "OK." Click "Music" in the Library pane to view all of the songs you imported. Select the songs you want to sync to the device. To select multiple tracks, hold the "Ctrl" button on the keyboard and click each song with the mouse. Click and drag the highlighted songs to the Philips GoGear icon in the Library pane to automatically sync the files to the device. By Nick Davis A MP3 file is a compressed digital music file. MP3 files generally are available on the Internet for downloading to your computer or transferring to a audio player like an iPod or other music device. Downloading and saving an MP3 file to your computer takes just a few steps. Visit one of many websites that sell MP3 files--Amazon.com, Walmart.com, iTunes.com, Napster.com and MP3Download.net are a few big ones. Most of them require you to register a user account. Most sites charge a fee for downloading MP3 files. Typically, a membership allows you to download a certain number of MP3 files each month. Files can be purchased with a credit card or gift card. MP3 files generally are intended for personal, non-commercial use. You are allowed to burn the files to a compact disc, play them on your computer or transfer them to your MP3 player. But you are not allowed to copy them for friends or use them for a commercial purpose. To download an MP3 file to your PC, right-click on the Download option of the MP3 file and select "Save Target As" if you are using Internet Explorer or "Save Link As" if you are using Firefox. Next, navigate to the directory where you want the file to be saved. Once the download is complete, you can open the file to play it or transfer it to your MP3 player. To play your downloaded MP3 file, open it in Windows Media Player, Real Player or any other music player. To download an MP3 file to your Macintosh computer, control-click on the "Download" option of the MP3 file and select "Save this link as." Select the directory where you want the file to be saved. Once the file is downloaded, open the MP3 file in your favorite music player or transfer it to your iPod or other MP3 player.
